GECKO GE1-16-1/0/1 standard equipment:

- Trolley equipped with 16 support-/carrying bars
- 1 sliding rack post
- 1 big bottom shelf 590 x 730 mm
- 1 small additional shelf 590 x 380 mm

Technical specifications:

Maximum needed space: length: 955 mm, depth: 870 mm, height: 1,690 mm
Max. loading capacity: for the entire trolley 320 kg, per two carrying bars 40 kg
Precondition: even load sharing and no shock force
Own weight (stand equipment): 53 kg
Slot in system with locking screw for the support-/carrying bars (AR590)
16 slots for support-/carrying bars (AR590) per rack post, grid 89 mm
Diameter of the support-/carrying bars: 23 mm, usable depth: 590 mm
Cover of bars solvent resistant, compatible with all usable lacquers
4 semi elastic wheels ø 125 mm for easy moving; thereof 2 with brake

Gecko, the innovative transport-/commissioning-trolley by JOWI

Gecko - double slantwise:

Due to the special construction, loaded items lean against the backside corner by itself.

No matter whether horizontal or vertical, stored parts are staying in position also during the transport.

Gecko supports the workflow:

The semi-elastic wheels are vibration absorbing and easygoing. One person is able to handle the loaded trolley easy and safety through the production.

Gecko - optimized room utilization and easy access:

Especially room saving at vertical storage side by side of items up to a length of about 2 meters.

Additional levels provide optimal room utilisation storing shorter items.

Gecko - quick and easy adaptable to your requirements:

Within the slotting grid, support-/carrying bars can be freely positioned and movable shelves can be refitted easily by a click at any time. Additional equipment (support-/carrying bars and movable shelves) can be refitted also at a later date.
